Sunlight Detectives

Discover how light moves around your growing space.

Little growers, big discoveries

3 DAILY CHECKS | LIGHT AND GROWING SPACES | AGES 5+ WITH AN ADULT

Grab your kit

Paper, a pencil, three place labels and a safe view of your growing space.

Your discovery mission

1. Choose three places you could put a Gro Box. Draw a simple plan and label the places A, B and C.
2. Visit in the morning. For each place, record direct sun, shade or cloudy conditions. Write the time.
3. Repeat around midday and in the afternoon. Stay in safe places and observe from indoors if needed.
4. Compare your notes. Which place received direct sun during the most checks? Read your chosen plant’s light requirements with an adult.

What did you discover?

Place I checked: _____ Morning: _____
Midday: _____ Afternoon: _____

Draw your discovery

Let’s wonder...

Can three checks tell us exactly how many hours of sunlight a place receives?

NEXT ADVENTURE

Repeat on another day or in another season. Clouds and the time of year can change your findings.

Never look directly at the sun. Children should check outdoor spaces with an adult.
